THUMBTRACK LP 1ANGLE is a tiny-aperture upright landscape LED luminaire, for installation into grass, mulch, earth, hardscape, small trees, shrubs, dry-set stone walls+stairwells, and more.

Suitable for decorative and accent lighting outdoors.

Suitable for IP67 installation in harsh environments, 1ANGLE is virtually indestructible, consisting of titanium, nylon, and nickel-plated brass. Features a tough PMMA lens that is optically superior to glass, for optimum beam uniformity and throw distance.

Because of its tiny size - with fixture diameter smaller than an American dime - 1ANGLE is virtually 'all light and no fixture', making it as appropriate for use as landscape lighting in historic projects, as it is in modern design projects.

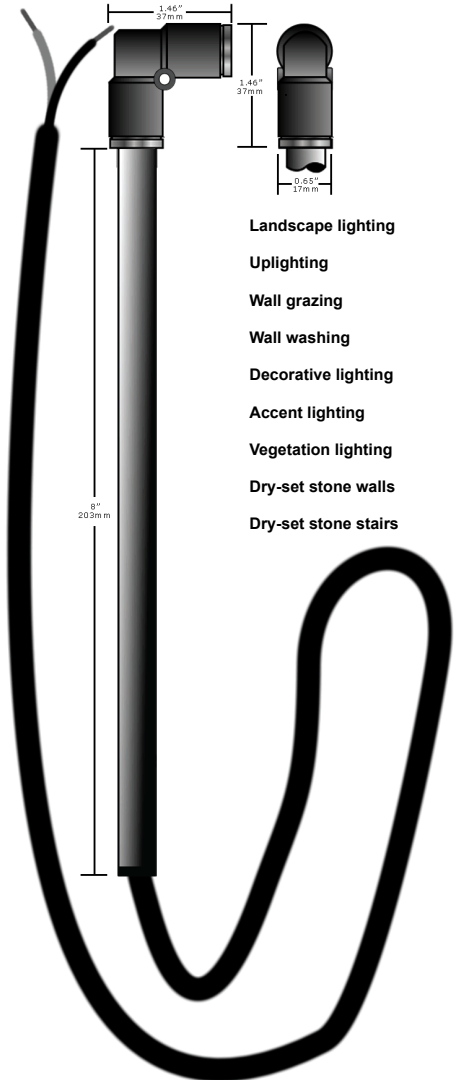

The MINIMIS patent-pending design features a fully-integrated, water-resistant lens+LED module, tested - under power - in full water immersion and exposed to -17°C. Integrated module design eliminates the need for gaskets that can crack and fail.

Installation is easy. Press into ground. Make final angle and orientation adjustments. Connect to a 12VDC power source according to instructions and electrical code.

Through-hole is employed for affixing to boughs of trees.

Three year repair or replacement warranty.

Material: Titanium, nylon, nickel-plated brass
Color temp: 3000° Kelvin +/- 50°K CRI >90
Luminous flux: 20 lumens
Lens: 61° beam angle PMMA lens
Pigtail: 23" standard double-sheathed pigtail
Mounting: Titanium stake.
Models: 1ALP30 - 3000° Kelvin
Power supply 12volt DC (constant voltage)
